INCREASE EFFICIENCY AND PROFITS

Single Cylinder with Hydraulic Down Pressure – Center Receiver Mount

- Eliminate back dragging and turnaround time required with all front mount plows
- Clean twice as many drives per hour with a Snowman plow without the added expense of another truck and driver
- Safer than back dragging because snow removal is performed while driving forward
- Exclusive High Lift reaches over drifts - eliminates hand scooping
- Carry a second load each trip across parking lots
- Superior cleaning with hydraulic down pressure
- Works as a productive ballast to relieve front axle stress for better front plowing performance
- Works great for all tight areas and dead end applications

"When I started using my Snowman back plow, I immediately noticed I was cutting my snow removal time in half, especially on driveways... I've also gained new accounts because of the cleaner job."

Charlie Nemeth
Nemeth Landscaping, PA
